

Company Profile

Company Philosophy

D&L Water Control, Inc. is a small, privately held company that takes great pride in its ability to satisfy its customers by offering custom, quality driven attention and service. We have an outstanding reputation in Michigan, Ohio, Kentucky, Illinois and New York. The size of our company not only allows for individual attention to our customers needs, but it also allows us to foster an intimate team approach to company management.

About Us

D&L Water Control, Inc. (DLWC) was incorporated in 1990. The total experience of our personnel gives the company 30 years overall length. Our capabilities encompass skillful research and development of products, inventory managing, manufacturing, warehousing delivery and intense technical service.

Our Laboratory Analytical Testing consists of complete water analysis, corrosion coupon analysis, microbiological analysis with ATP bioluminescence and spectrophotometric analysis of metals. Special studies can be conducted as needed to offer the customer complete water analysis and treatment for their systems.

We have the ability to design, blend, and/or provide specialized chemicals for specific applications. The essence of our existence is primarily based upon our aptitude and ability to custom formulate and respond to the specific needs of our customers. We have the ability to provide chemicals in returnable drums, returnable tote tanks, mini-bulk or bulk tank truck shipments. The form of shipment is based on each specific location needs. Our production and warehousing facility is located in Canton, Michigan.

Project Approach

DLWC Management Programs include but are not limited to:

1. Effective, efficient, high quality chemical management.
2. Regular, meaningful consulting service, with goals established every 90 days and reviews monthly, quarterly and annually. We are committed to provide a first class consulting service program. This program will be custom tailored to meet the needs of all concerned operating personnel.

During the initial start-up DLWC will be on hand as often as necessary in order to implement a smooth transition. During our service visits, the following will be reviewed:

- Chemical residuals
- Chemical inventory
- Pumps and controllers inspected
- Microbiological testing
- Visual examination of entire project

3. The prevention of scale and corrosion in all systems and documentation of results with a computer database, graphing of systems results, and trend analysis. Complete laboratory analytical testing will involve the following:

- Complete water analysis
- Corrosion coupon analysis
- Deposit analysis
- Microbiological analysis
- Spectrophotometric analysis of metals

4. Quality operator training. Education is an integral element in proper chemical treatment maintenance. We will teach the operators how to become aware of potential problems and how to correct them. This training will help trouble-shoot the systems between our service visits and will help maintain constant system control. The training program will explore the purpose of water treatment, treatment theory, chemical testing, chemical handling, and problem solving.

At D&L Water Control, Inc. we feel that it is our obligation to continually preserve the following principles:

To provide the most current chemical technology.

To supply concentrating, high quality products ensuring reduced chemical costs.

To provide consistent technical consulting service.

To maintain maximum corrosion protection of all water systems, ensuring maximum equipment life.

To offer quality operator training in an effort to achieve constant program performance.

To extend the highest level of personnel integrity so that we continually make recommendations with the customers best interests in mind.

To assign a technically competent account management staff to assure ideal system results.
